A Unique opportunity

In February, 2010 Sub Aviators will be conducting SAS underwater Flight Schools on the Island of Maui! There is an opportunity for interested participants to join us and attend one of the 1, 2 and 3-Day Flight Schools scheduled during our operations. Flight Schools put you in the cockpit of the SAS **Super Aviator**, offering a firsthand look at the magnificent reef systems and sea life west of Maui, while experiencing the thrill of flying underwater! **SPACE IS LIMITED.** If this sounds like your kind of adventure, book your underwater flight package today.

Super Aviator is equipped to transport pilots through recreational Scuba diver depths and beyond, down to 600 feet beneath the waves. Pilots breathe normal air in dry, pressurized cockpits. There's no need to calculate decompression or ascent rates and no complex mixed-gas ratios to worry about. In fact, no prior Scuba diving or aircraft piloting experience is necessary in order to take your first underwater flight!

Fighter Jet or Helicopter?

Capable of flying in a state of positive *or* neutral buoyancy, and with a top speed of six knots, **Super Aviator** can quickly dive or climb, make level or banking turns or just hover to give her pilots a chance to savor the view. Versatility and freedom of movement make **Super Aviator** unique in the world of underwater vehicles. Flight School participants may get a chance to 'push the envelope' and appreciate the need for the 5-point racing harnesses installed in the cockpits.

State of the Art Equipment

Super Aviator carries state of the art equipment including a NewtComs underwater communication system and Imagenex multi-beam sonar. SAS Flight Crew utilizes an underwater tracking system and GPS aboard our surface support craft to plot **Super Aviator's** course and position making it possible for you to return to any sites of interesting discoveries for further exploration on subsequent dives.

Green Footprint

Battery power allows for **quiet and non-polluting** underwater operation minimizing any disturbance to flora and fauna. Multiple, redundant life-support systems and self-rescue devices are standard equipment to maximize safety while responsibly enjoying the underwater environment.

**Base Camp
near Lahaina, Maui**

**Take
advantage of great rates
on airfare and accommodations
and make your Flight School a
Hawaiian vacation!**

Learning to fly Super Aviator is Intuitive and fun

A Pilot-in-Command is provided for all flights. Since flight controls are duplicated in both cockpits **Super Aviator** is an ideal trainer for gaining hands-on flight experience. As flight skills and confidence increase with training and underwater experience, more and more control of the craft can be passed from Pilot to Co-Pilot. Mastering underwater flight is a pursuit that makes each dive rewarding, and every dive a voyage of discovery.

Reserve your underwater adventure for February of 2010, today!
